

NEW

mafell

creating excellence

New premium adapter plate (MAX holder) as holding fixture for any systerainer generation and L-BOXX.

Uninterrupted operation for long periods of continuous duty. Owing to the very latest filter cleaning technology, consistently high suction performance is maintained even during the automatic main filter cleaning cycle.

The control panel on the front gives easy access to the dials for selecting the desired suction mode and hose diameter.

Clogging of the filter has been reduced even further by a special coating. Thanks to the extremely effective cleaning technology, moreover, even large quantities of fine dust are easily and reliably removed.

New rotary vane at the outlet connection which will also allow the use of PE disposal bags in the future.

New additional function: Easier and safer hose winding due to integrated cable hook with plug locking device at the adapter plate.

The hose is antistatic. The user is thus protected against electrostatic discharges (electric shock), and dust residue is less likely to cling to the hose.

Delivery specification

S 35 M

91C401

Product features

- **Rated for dust class M**
- **Permanent Clean technology for uninterrupted continuous duty**
- **iPulse sensor technology monitors extent of filter contamination**
- **Anti-static properties included**

Application area

- For wet and dry pick-up
- For picking up waste
- Compatible materials include dust, chips, liquids

Product description

The newly revised S 35 M (lighter, more efficient and functional) combines excellent extraction quality with high user convenience. Thanks to Permanent Clean functionality, a nano-coated main filter and intelligent iPulse sensor technology, all types of dust in dust class M are permanently and reliably removed.

The extent of filter contamination is monitored by special sensor technology. As a consequence, cleaning takes place only when the filter is actually contaminated, and not at fixed intervals or when the hose is blocked or kinked.

Thanks to the automatic on/off switch, the MAFELL dust extractors can be used for extracting the dust created by all other makes of power tool as well. All the MAFELL models are also suitable for picking up liquids.

Technical data

Bin capacity	35 l
Bin water capacity	22 l
Hose connector	Ø 66/58 mm
Low air pressure	280 mbar
Dimensions (W x L x H)	500 x 405 x 570 mm
Volume flow rate	270 m ³ /h
Nominal input	1200 – max. 1400 W
Weight without MAX-holder	15,6 kg
Weight with MAX-holder	16,8 kg
Universal motor	230 V/50 Hz

Delivery scope includes

1 Extraction hose 4 m	093684
Ø 27 mm with soft cone 35 mm, torsion joint, Ø 66 mm bayonet, anti-static	
1 Fold filter cassette, 1 pair, polyester nano-coated (6000 cm²)	093720
1 MAX-holder	
1 PE dust bag FB 35	
1 Mains cable 8 m	176030

Accessories / Tools

4 m Extraction hose 27 mm (soft cone 35 mm - anti-static)	093684
5 m Extraction hose 35 mm (soft cone 35 mm - anti-static)	093681
2,5 m Extraction hose 49 mm (cone 58 mm - static)	093682
5 m Extraction hose 49 mm (cone 58 mm - static)	093730
Hand-held extraction set D 35	093718
Fold filter cassette, 1 pair, polyester (8600 cm²)	093674
Fold filter cassette, 1 pair, polyester nano-coated (6000 cm²)	093720
Non-woven filter bag V-FB 25/35 (5 pieces, packed)	093719
PE dust bag (5 pieces, packed)	093721
Reducing socket 58/35 mm	203602
Machine holder S200-MH	207164
Chip bag S 200	093791
High-capacity extractor S 200	206869
